Abstract

The traditional way of buying tickets in TTC possesses numerous problems and to overcome such problems our team has identified a solution which will help people to buy TTC tickets and passes on their smartphones..

In this technical report we explore the methods which are currently used and built an application which will allow the user to register oneself, purchase and activate a TTC ticket or a pass containing a bar code which can further be scanned by the drivers. We provide a flexible, easy and a convenient way to travel on TTC buses.

This project holds a great significance to the Toronto transit riders who commute daily by buses and streetcars. Losing paper tickets, waiting in long queues to buy monthly bus passes, shortage of coins while paying the fare and many other such issues are faced by people on daily basis.

1.0 INTRODUCTION

People in day to day life use TTC buses to travel for their business, schools etc. TTC buses take people almost anywhere they want to go very quickly in Toronto. But most of the people facing problems to manage TTC fare while travelling. TTC offers paper tickets, tokens and PRESTO as valid ticketing proof. While boarding to bus sometimes people forgot to buy tickets and then they have to purchase ticket from driver by putting coins in box. And at that area they face a big problem as no change/ coins available.

Furthermore, if they purchase those tickets they have a fear to loss paper tickets issued by driver for next two hours.

To overcome this issue, our team proposes a solution to develop an android application named as "TTCPay" where people can buy digital tickets and passes. This app will allow users to check their ticket history, buy tickets online and leaving behind the hustle of carrying coins to pay the fare while boarding. By using this application, people have no need to carry PRESTO card or paper-ticket with themselves while travelling as ticket with hour limit(running clock) would be available on application. Also there would be a BAR code reader with mode information of ticket.

If we talk about the technical aspect of problem, we could say it is so hard for both driver and passenger to manage the paper ticket. Sometimes, paper is not available on machine and passenger has to wait for long time, which further delays the bus. Also for PRESTO users, if the PRESTO machine on bus has some technical problem, then driver has to allow that passenger to board bus for free, which leads to business loss. According to recent Toronto Star report, The TTC has inadvertently given out 1.4 million free rides over the past two years because of faulty technology.

The problem described above is very general problem that we as a student are facing now a days. Although a lot of students have their monthly passes to travel. Still if for one or two days their passes has expired then they have to go to TTC

station to buy a new one. Our proposed solution is providing a better way not to waste time by going to station to buy new passes as application provides a better way to buy a paperless monthly pass via phone. Team chose this project to resolve people's daily life problem by saving their time and money.

Every person travel on regular basis for different purposes. This daily travelling is going to cost you by time anyhow. So, we come up with an idea of this application which allows passengers to buy TTC tickets and passes anytime through their smartphones. This is a flexible and convenient way of purchasing tickets. Moreover, it will help users to search routes, address and stop numbers and find specific stop details.

Our objective to provide an optimal solution for the problem encountered above. Our main focus is to save people time and money and make their travelling easy and relaxed. By offering this application as a solution, people no need to worry about tickets, passes and coin money. They can directly buy tickets or passes from this application and can show to the drivers while boarding the bus. The additional feature to check the ticket history and pre purchase of tickets provide more flexibility and features for people.

The real time problem our team face to interpreting the work is to find out How TTC works. To deeply understand the problem we need to contact people of different categories who use TTC for daily travelling and find out how paying with various methods affect their time and money. The another big problem we face as a team to find out the perfect solution for the problem. We as a group of two, travel to different TTC routes with different payment methods to find out the problem. It was so tedious task for us while managing studies and other stuff at same time.

2.0 METHODOLOGY AND RESULTS

2.1 Literature Review

The problems that are faced by TTC were tried to get solved by the students mainly focusing on the aging infrastructure, challenges of the budgets, customer

complaints, and many more. Many solutions were implemented but no desired result was obtained as per the expectations.

Secondly, the solutions regarding the sexual harassment and assaults were to be taken care of because of which the citizens were suffering a lot. But, there was no such proper conclusion given for these problem too.

Besides these, we are facing many problems such as presto card, no-change issues, absence of coins, losing the paper tickets or the monthly bus passes, etc. Moreover, many newly arrived people are not aware of the expiration of the ticket that it gets expired in two hours from the time of issue. So, to overcome such problems, we are developing an app through which the work of the citizens will become too easy.

The app will act as a helping hand to the people as buying tickets online, ticket history, change issues will be solved. And, furthermore, people can also pre-purchase the tickets prior to their boarding to prevent the hustle at the station. Once registered as a passenger, a person can solve these tickets and passes issues easily.

2.2 Proposed Solution

TTCPay application will allow customers to book their tickets online and will provide them digital tickets and passes which they can activate when they will start their journey. Moreover, people will get the feature of checking their ticket history. This app will be more convenient for people as they don't have to worry about losing their paper tickets or having change (coins, bills) all the time for ticket and they can book their ticket in advance. E-ticket is a better option than a paper ticket as their will be a unique barcode with ticket information on every ticket so it will be easy for drivers or ticket checkers to scan barcode and verify the ticket.

Strengths of TTCPay:

1. Digital ticket will be provided, so no fear to lose the ticket.
2. Pre-purchasing of ticket.

3. People can activate their ticket any time before the starting of their journey.
4. All information will be printed on the ticket such as validity of ticket or ticket expiration.
5. People can check their ticket history and can check that how much they spend monthly on their travelling.
6. Discounts will be provided based on their ticket and passes booking history.
7. Easy to use and fast service.

Weaknesses of TTC Pay:

1. Need of internet connection all the time
2. Need good battery backup for device
3. Should know how to use android app in phone

Figure 1 Network Diagram

2.3 USER ROLE MODELLING

2.3.1 Brainstorm and Group

After a collaborative discussion by our team members on brainstorming of user roles, our team concluded on the user roles stated below.

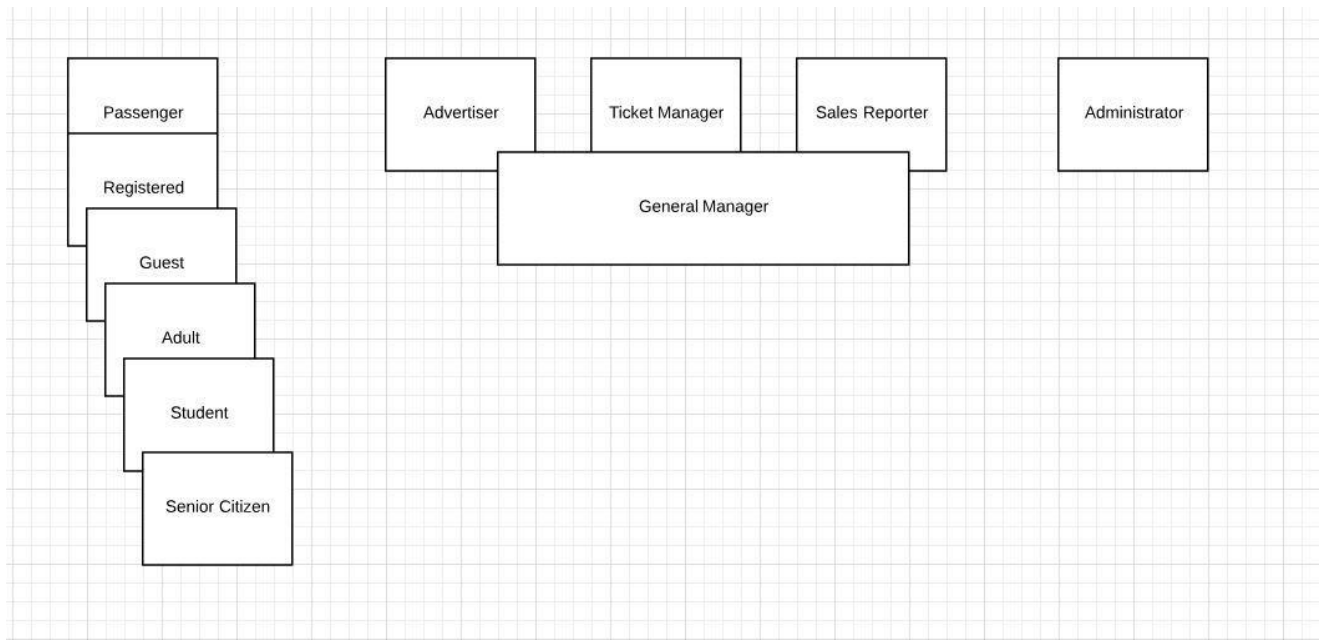

Figure 2: Organizing the user role cards on a table [1].

2.3.2 Consolidated User Roles

After a brief discussion on the user roles , our team tried to consolidate and condense the roles.The figure below shows the consolidated roles for the TTC Pay app :

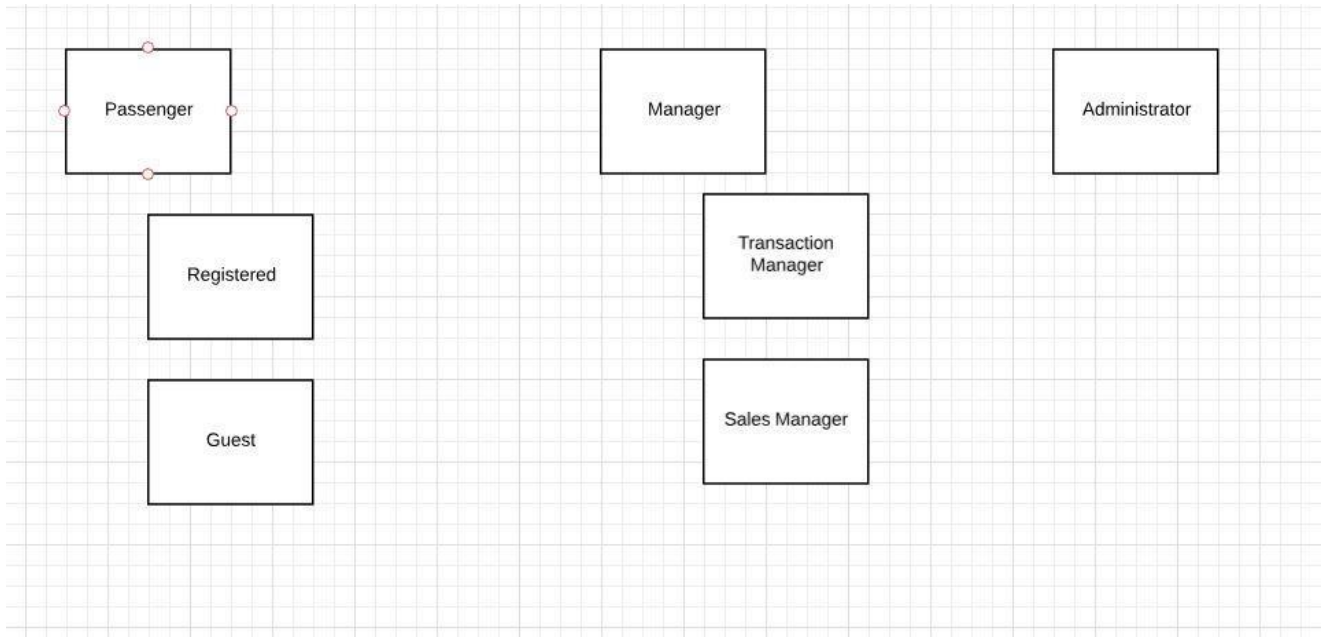

Figure 3: The consolidated role cards [1].

2.3.3 Description of User Roles and Persona

All of the consolidated user roles with their brief role description is as below:

a. **Passenger:** This person plays a role of main user who will access this application on frequent basis. This role could further be of two types: Guest User or Registered User. Based on the selection to use application, passenger can perform certain activities offered.

- **Registered user:** Registered user will enjoy the benefits of viewing all the discounts and promotions, view transaction and travel history and will be able to purchase tickets at discounted rates.
- **Guest user:** Guest user will be a regular user who will be able to purchase a ticket at a normal price without having access to the discounts and promotional offers and would not be able to view his travel history.

b. **Administrator:** The core function of any software is to administer it. Administrator is the user role who will perform administrative tasks like managing the software users, tickets, performance etc. This user role will be the second main role who will frequently use application.

c. **Manager:** The role of the manager is to handle the reports of purchasing details of individual users. The role of manager is further divided into two categories: Transaction manager and sales manager.

- **Transaction manager:** Transaction manager will be able to view all the transactions and manage the transactions which are processed by the users. He will also resolve all the issues related to the payments.

- **Sales manager:** Sales manager will be able to view the sales history and will monitor the strength of the sales, accounting for transactions and for presenting new ideas to enhance the operations.

2.4 Release 1.0

2.4.1 User Stories

Passenger Prototype

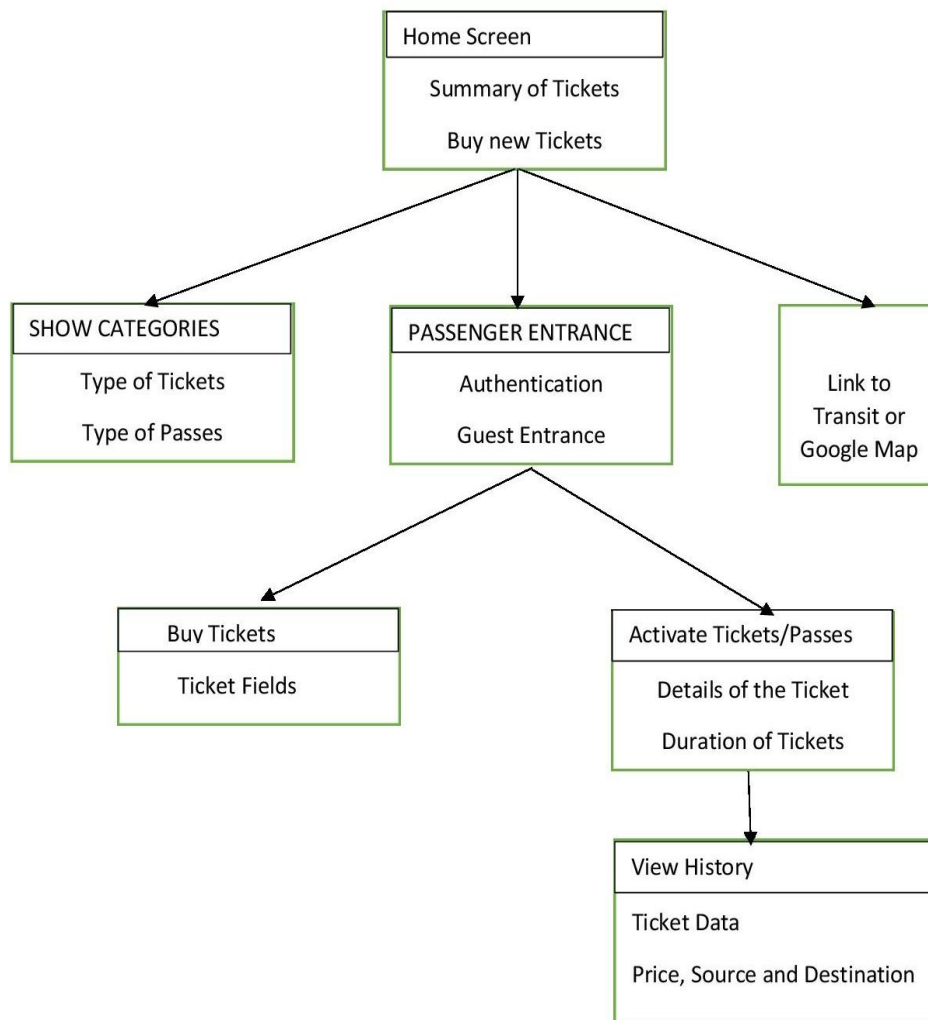

Figure 4: A low-fidelity prototype for passenger.

Admin Prototype

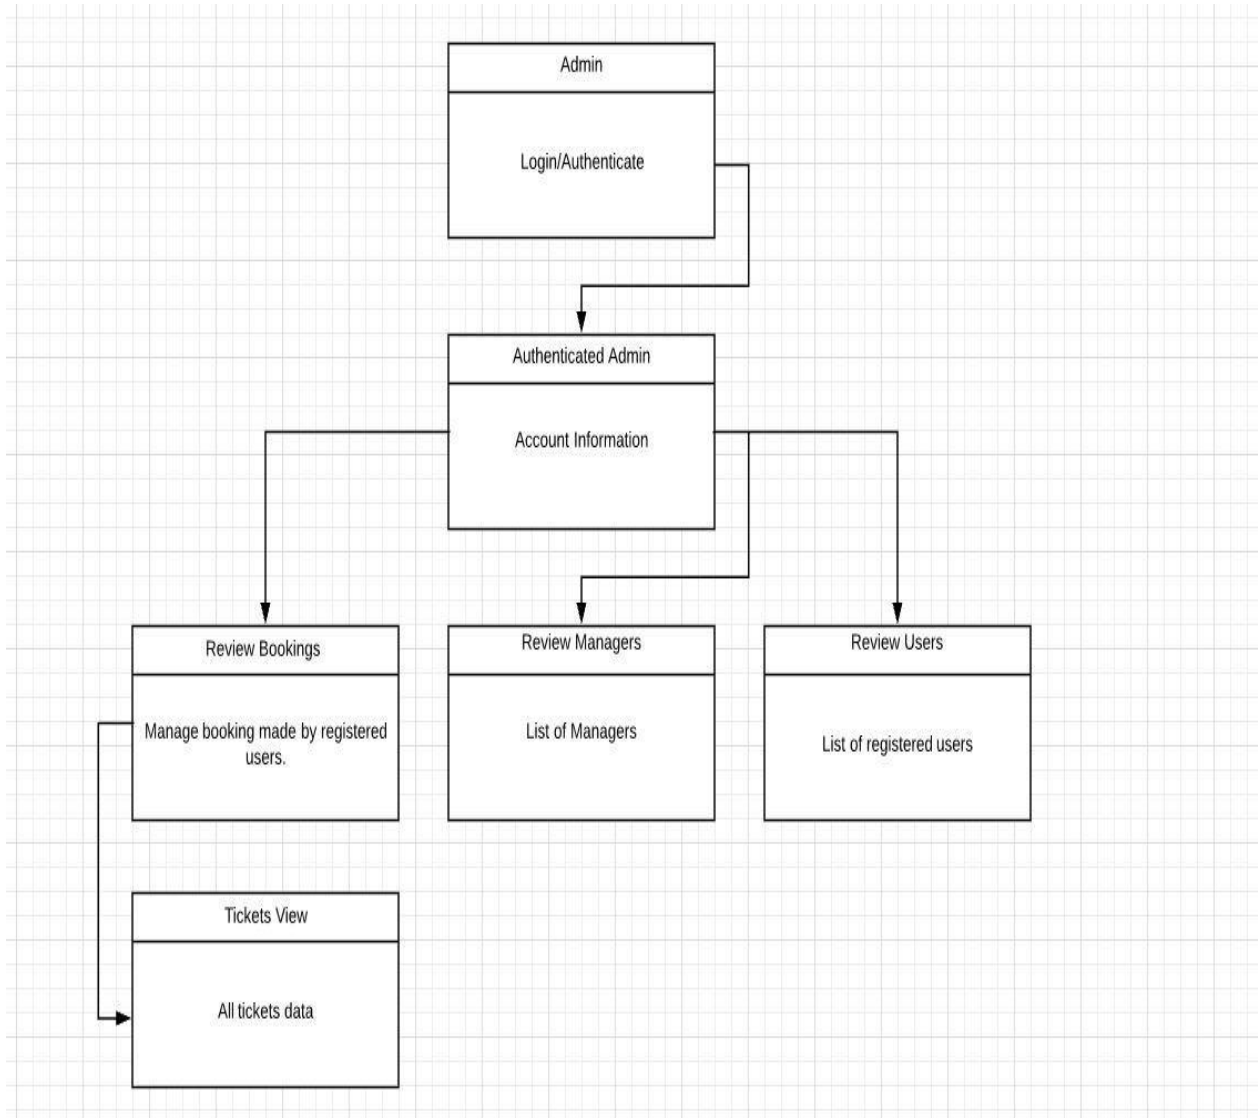

Figure 5: A low-fidelity prototype for admin.

Manager Prototype:

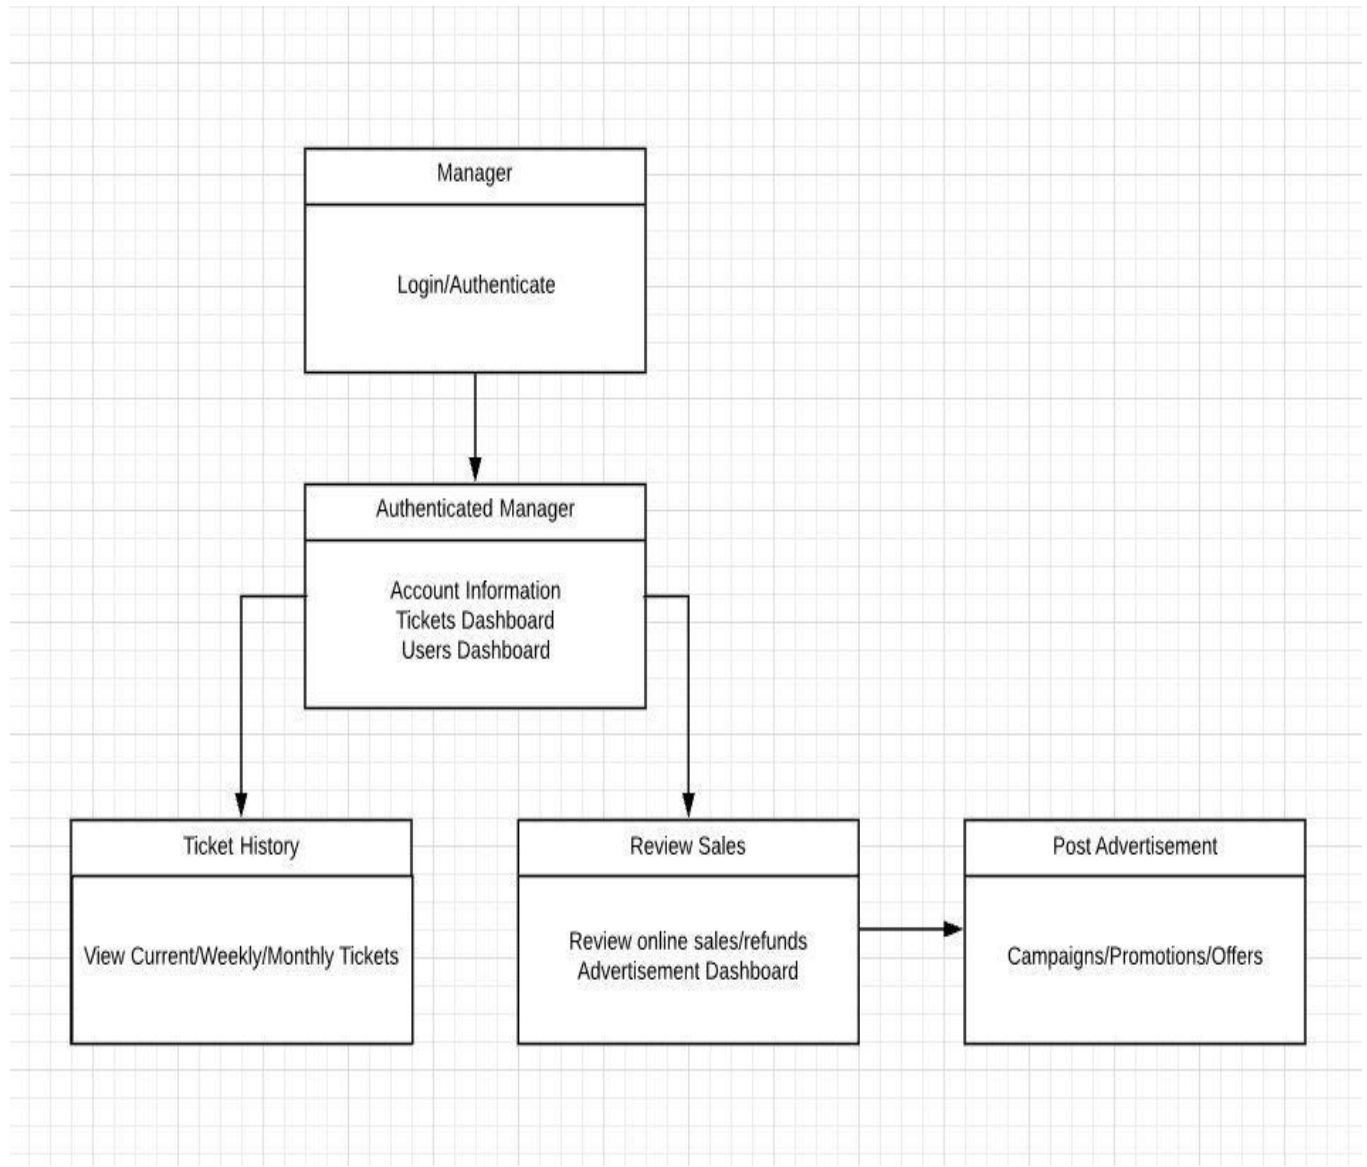

Figure 6: A low-fidelity prototype for manager.

User Story:

A user can login as guest or existing user.

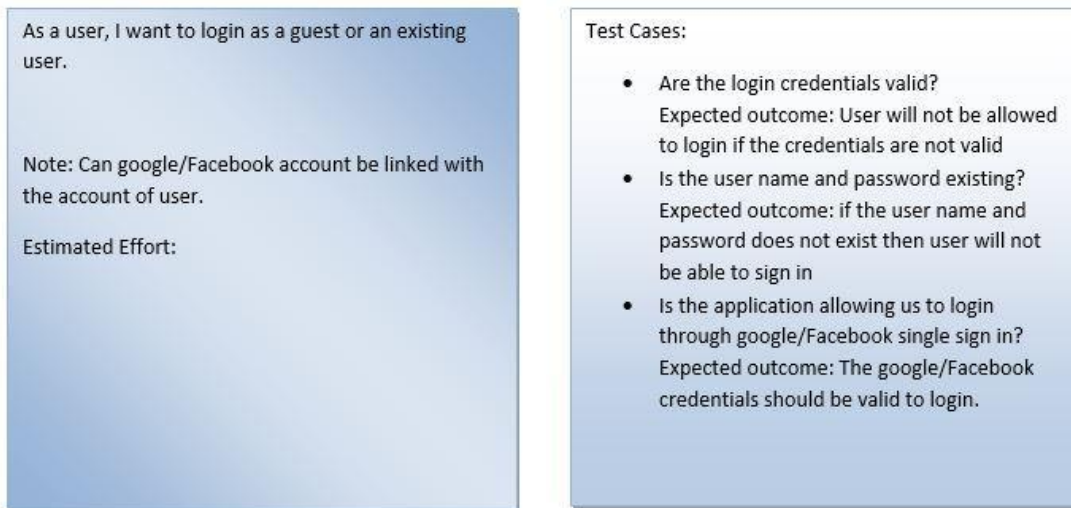

Figure 2.4.1: Representation of login story card.

User Story:

User can buy a ticket on or before boarding.

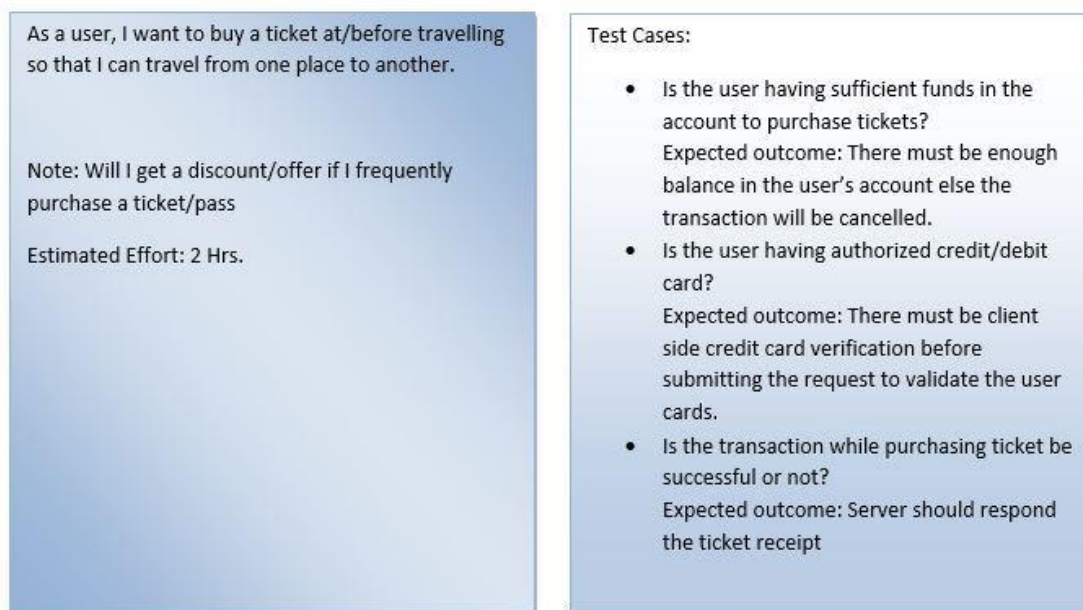

Figure 2.4.2: Representation of ticket purchasing story card.

User Story :

User can choose the category of pass or ticket, like adult, student.

<p>As a user, I have to choose the category of the ticket i.e. Adult, Senior Citizens, Children, etc.</p> <p>Note: Proper category of the ticket must be chosen.</p> <p>Estimated Efforts: 0.5 hr.</p>	<p>Test Cases:</p> <ol style="list-style-type: none"> 1) Submitting the category form without choosing the specific category. <u>Expected outcome:</u> The system will automatically select the Adult category and redirect to the payment page.
--	---

Figure 2.4.3: Representation of choosing a ticket category story card.

User Story:

Admin can introduce changes. (i.e.; updates and pricing)

<p>As an Admin, I want to introduce <u>changes</u>(i.e. price update and other administrative tasks)</p> <p>Note: At the time of updating, make sure atomicity, consistency, isolation and durability is maintained.</p> <p>Estimated Efforts: 2.0 hr.</p>	<p>Test Cases:</p> <ol style="list-style-type: none"> 1) Are the login credentials for admin valid? <u>Expected outcome:</u> Admin <u>can not</u> login if the username and password doesn't match with admin credentials. 2) Prices are updated or not after making significant modifications. <u>Expected outcome:</u> Notification for successful price <u>update</u> must be pop-up with updated prices in new window.
--	--

Figure 2.4.4: Representation of introducing changes by admin story card.

User Story:

Manager can post offers and changes on the prices.

<p>As a Manager, I want to post advertisement/promotions/offers</p> <p>Note: Only manager can post advertisements on dashboard.</p> <p>Estimated Efforts: 1.0 hr.</p>	<p>Test Cases:</p> <ol style="list-style-type: none"> 1) Are the login credentials for manager valid? <u>Expected outcome:</u> Manager <u>can not</u> login if the username and password doesn't match with manager credentials. 2) Advertisement appeared on dashboard or not after posting new advertisement. <u>Expected outcome:</u> Dashboard updated with new advertisement and can be viewed by users.
---	---

Figure 2.4.5: Representation of posting advertisements by manager story card.

User Story:

User can activate the purchased ticket.

<p>As a user, I want to activate my bus ticket or pass.</p> <p>Note: Already bought tickets and passes can be viewed.</p> <p>Estimated Efforts: 1 hr.</p>	<p>Test Cases:</p> <ol style="list-style-type: none"> 1) Ticket is valid to activate. <u>Expected outcome:</u> The system will show message for ticket activation successfully. 2) Ticket is not valid. <u>Expected outcome:</u> The system will show error message for ticket that ticket is already <u>used</u> or this bar code doesn't exist.
---	---

2.4.3 Release Plan (1.0)

Highest Ranked Prioritized stories

Stories
A user can buy a ticket.
A user can buy a pass.
A user can Choose Pass Type (monthly or weekly).
A user can choose the category of the ticket or pass.
A user can add/edit the credit/debit card details
A user can make payment.
A user can activate the ticket
A user can login in the system.
User can access menu in application.
A User can pre-estimate the journey in terms of money, time, and number of tickets.
A User can terminate the ticket.
A user can view purchased tickets/passes.
A user can view or track the ticket transaction history.

MoSCoW Rule:

Table 1: The **Must-Have** stories for initial Release (1.0).

Stories	Estimate (hrs)
---------	----------------

A user can login in the system.	1.0
A user can buy a ticket.	1.5
A user can buy a pass.	1.5
A user can Choose Pass Type (monthly or weekly).	2.0
A user can choose the category of the ticket or pass.	1.0
A user can make payment.	1.5
A user can add/edit the credit/debit card details.	1.0
A User can pre-estimate the journey in terms of money, time, and number of tickets.	2.0

Table 2: The **Should-Have** stories added to Release (1.0).

Stories	Estimate (hrs)
A user can view purchased tickets/passes.	1.5
A user can activate the ticket.	2.5
A user can view or track the ticket transaction history.	1.5
A User can terminate the ticket.	1.0
A User will be notified for the ticket expiration.	1.0
Admin can introduce changes.	2.0
User can access menu in application.	2.0

Table 3: The **Could-Have** stories

Stories	Estimate (hrs)
A user is notified with the deals/discounts/promotions.	1.5

A user can delete/edit the profile.	0.5
A user can change select the language.	1.5

Table 4: The **Won't-Have** stories

Stories	Estimate (hrs)
Application must be capable of bulk concurrent users access to avoid crashes.	2.0
A user can provide feedback based on experience.	1.5

Release Plan Table

Iteration 1	Iteration 2
A user can access the application either as guest or existing user	A user can make a payment in order to buy the pass/ticket
A user can Choose Pass Type (monthly or weekly).	A user can view ticket history.
A user can choose the category of the ticket or pass.	A user can activate the ticket.
A user can buy a pass.	A user can terminate the ticket.
User can access menu in application	A user can add a credit/debit card.
A user can buy a ticket

User Story:

User can be notified for promotions/deals/discounts.

<p>As a user, I can want to get notified about the promotions/deals/discounts.</p> <p>Note: Notification will be automatically sent to the registered users about the promotions.</p> <p>Estimated Efforts: 1 hr.</p>	<p>Test Cases:</p> <p>1) Notifying about the deals/promotions/discounts.</p> <p><u>Expected outcome:</u> The system should automatically send the notifications to the registered users about the upcoming promotions.</p>
---	--

Figure 2.5.5: Representation of notifications regarding promotions story card.

2.5.2 Release Plan 2.0

Highest Ranked Prioritized stories

Stories
Admin can introduce changes. (i.e. updates and pricing)
A User can edit/delete the profile.
A User can be notified for promotions/deals/discounts.
A User can provide feedback based on experience.
Admin or Manager can Login to the system.

Table : 17: Release plan 2 stories list

MoSCoW Rule:

Table 18: The **Must-Have** stories for initial Release (2.0).

Stories	Estimate
.Admin can introduce changes. (i.e.; updates and pricing)	3.5
Manager can post offers and advertisements .	2
A User can be notified for promotions/deals/discounts.	1.5
Application must be capable of bulk concurrent users	2

access to avoid crashes.	
--------------------------	--

Table 19: The **Should-Have** stories added to Release (2.0).

Stories	Estimate (hrs)
A User will be notified for the ticket expiration	2
A User can edit/delete the profile.	2.5

Table 20: The **Could-Have** stories

Stories	Estimate (hrs)
A user can provide feedback based on experience.	2
A User can change/select the language.	1.5

Release Plan Table

Iteration 3
A User will be notified for the Pass expiration.
Admin can introduce changes. (i.e. updates and pricing)
A User can edit/delete the profile.
A user can provide feedback based on experience.
Admin can access users and tickets.
Admin can login in the system.

Table 21: Release 2.0 plan Table

2.5.3 Iteration Plan

Iteration 3 : Task Tables

Task	Who	Estimate	Actual
Code basic admin login screen	Deepinder	1 hr	1 hr
Code advanced admin login screen	Kiran	1 hr	1 hr
Write and tune SQL queries for user and guest logins	Sakshi	2 hrs	3 hrs

Table 22: Disaggregated tasks of admin login story

Task	Who	Estimate	Actual
Code user & ticket accessing screen for Admin	Shiva	1 hr	2 hr
Write and tune SQL queries for users & tickets access story	Sakshi	2 hr	3 hr

Table 23 : Disaggregated tasks of admin can access users & tickets story

Task	Who	Estimate	Actual
Code basic feedback screen	Shiva	1 hr	1 hr
Code feedback option in Menu	Shiva	1 hr	1 hr
Write and tune SQL queries for storing feedback	Shiva	2 hrs	2 hrs

Table 24 : Disaggregated tasks of feedback story

Task	Who	Estimate	Actual
Code basic access screen for admin	Kiran	1 hr	1 hr
Code price updation screen for admin	Deepinder	2 hr	3 hr

Write and tune SQL queries for updation	Kiran	2 hr	2 hr
---	-------	------	------

Table 25 : Disaggregated tasks of admin can make changes story

Task	Who	Estimate	Actual
Code basic edit profile screen	Sakshi	1 hr	1 hr
Code basic delete profile screen	Sidharth	1 hr	1 hr
Write and tune SQL queries for editing and deleting profile information	Sidharth	2 hrs	3 hrs

Table 26: Disaggregated tasks of editing and deleting profile information story

Task	Who	Estimate	Actual
Code basic notification message on Pass expiration at the End of Month.	Manthan	1 hr	1 hr
Code basic notification message on Pass expiration through prompt on available passes screen.	Sahith	1 hr	2 hr

Table 27: Disaggregated tasks of notifying User for Pass expiration information story

2.5.5 Progress Monitoring

	Iteration 3
--	-------------

Story points at start of iteration	22
Completed during iteration	18
Changed estimates	7
Story points from new stories	3
Story points at end of iteration	28

Table 28 :Progress and changes for all Iterations for Release 2.0

2.5.6 Acceptance tests

Full description of user story	Acceptance test(s)	Name(s) of contributing Developer(s)
As an User, I will be notified of pass expiration	User gets a prompt at 1 hr 45 minutes after the ticket being activated. Expected outcome:User gets a prompt of ticket expiration	Manthan
As an Administrator, I can update the prices of the tickets and passes	Admin can update the enter the updated price in price updation screen Expected outcome: Price updation successful prompt and price gets updated in application	Deepinder , Kiranpreet
As an User, I can edit or delete the profile	A user can choose to delete the user profile by selection delete profile button Expected outcome: User profile gets deleted User can edit the profile details Expected outcome: The user details should be updated in the application.	Sidharth Sakshi
As an User, I can provide feedback	User can enter its comments in the feedback screen	Shiva

based on the user experience	Expected outcome: The user comments should be updated and user should get a prompt that feedback has been submitted	
As an Admin , I can access users and tickets	<p>Admin can view and access all the users of the application</p> <p>Expected outcome: Admin can access and view the profile information of the guest and registered users</p> <p>Admin can view tickets price and update the prices</p> <p>Expected outcome:The list of the ticket price can be viewed by the admin and price can be updated on price updation screen</p>	Sidharth Shiva Sakshi
As an Admin , I can login in the system	<p>Admin logs in with a username and password</p> <p>Expected Outcome : user is successfully able to login and use the application</p>	Sidharth Shiva

Table 29: Acceptance tests for Release 2.0

3.0 Conclusion

The delivered prototype demonstrates that TTCPay Application provides a user friendly interface to buy the TTC bus tickets and passes online by providing convenience to the passengers. The application uses an android platform for the implementation. The systems comprised of many subsystems which included Registration subsystem , payment subsystem , feedback subsystem and ticket and pass selection subsystem. All the subsystems were tested by testing the functional aspects separately and then testing the entire system as a complete

unit.

The TTCPay application provides a quality of service and good platform to the people for purchasing tickets with ease. The future implementations may include features such as providing payment gateway to the system and providing travel pre-estimation to the passenger. Including other features in the application , elevates the chances of this application to be sustainable.

APPENDIX A

Paper Prototype:

Iteration 1:

User Story: A user can buy a ticket by selecting the buy ticket button and furthermore

can select a category.

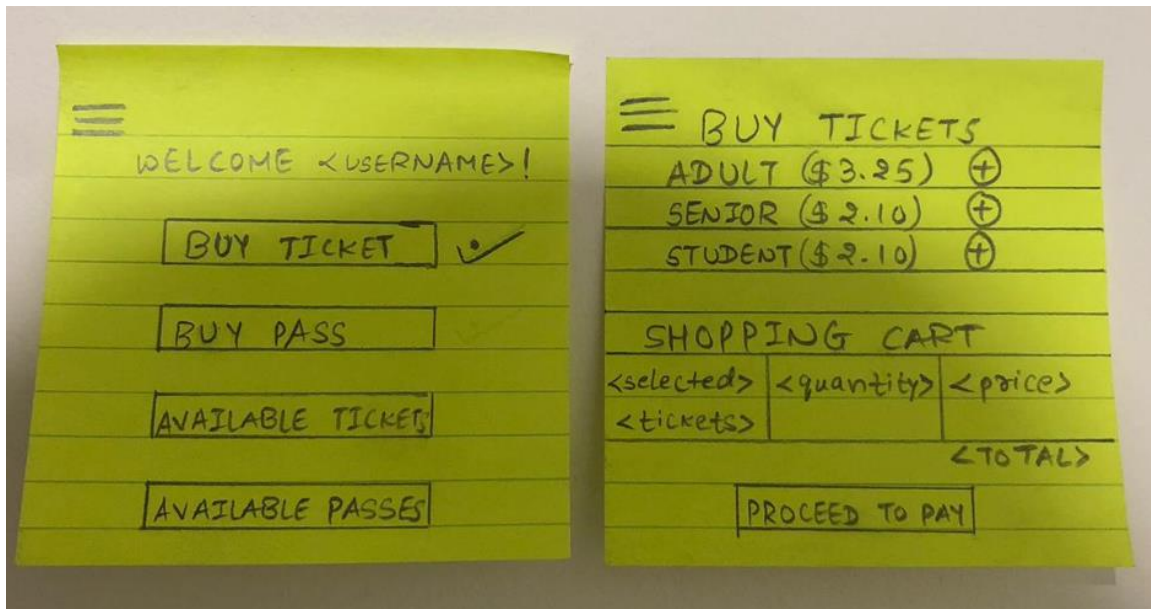

Figure 1: A user can buy a ticket.

User Story: A user can buy a pass by selecting the buy pass button and furthermore can select a category.

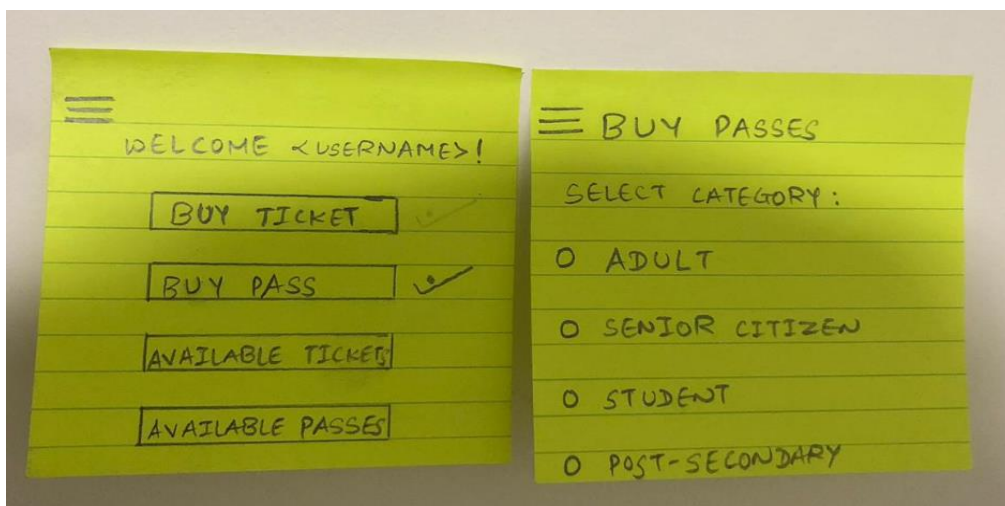

Figure 2: A user can buy a pass.

User Story: A user can select the type of the pass from mentioned 3 categories i.e.

Daily, Weekly, or Monthly.

A hand-drawn wireframe on a yellow sticky note for a pass selection screen. At the top, there is a hamburger menu icon followed by the text "<selected category> PASSES". Below this is the heading "SELECT TYPE:". There are three radio button options: "WEEKLY (\$-)" with a plus sign, "DAILY (\$-)" with a plus sign, and "MONTHLY (\$-)" with a plus sign. Below these options is the heading "SHOPPING CART". Under the heading is a table with three columns: "<selected>", "<quantity>", and "<price>". The first row of the table has the entry "<passes>". To the right of the table, there is a label "<total>". At the bottom of the sticky note, there is a button labeled "PROCEED TO PAY".

Figure 3: A user can choose the category for the pass.

User Story: A user can choose the category of the ticket from the mentioned 3 categories i.e. Adult, Senior Citizens, or Student.

A hand-drawn wireframe on a yellow sticky note for a ticket selection screen. At the top, there is a hamburger menu icon followed by the text "BUY TICKETS". Below this are three radio button options: "ADULT (\$3.25)" with a plus sign, "SENIOR (\$2.10)" with a plus sign, and "STUDENT (\$2.10)" with a plus sign. Below these options is the heading "SHOPPING CART". Under the heading is a table with three columns: "<selected>", "<quantity>", and "<price>". The first row of the table has the entry "<tickets>". To the right of the table, there is a label "<TOTAL>". At the bottom of the sticky note, there is a button labeled "PROCEED TO PAY".

Figure.4: A user can choose the category for the ticket.

User story: A user can directly login if has an account, or else need to create an account

to buy tickets or passes.

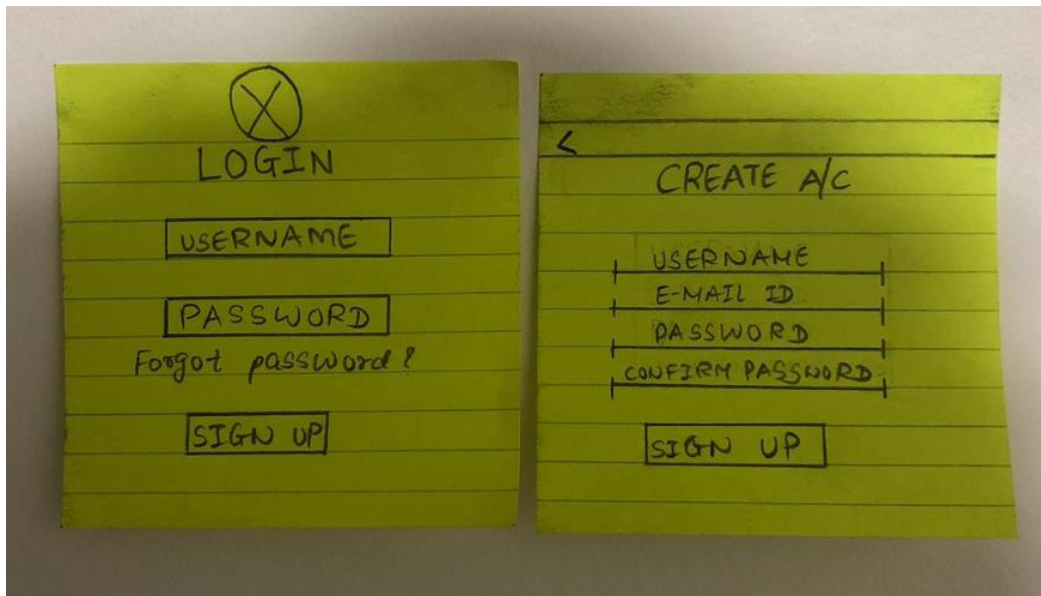

Figure 5 A user can login in the system.

Iteration 2: Paper prototype

User story: A user can make payment.

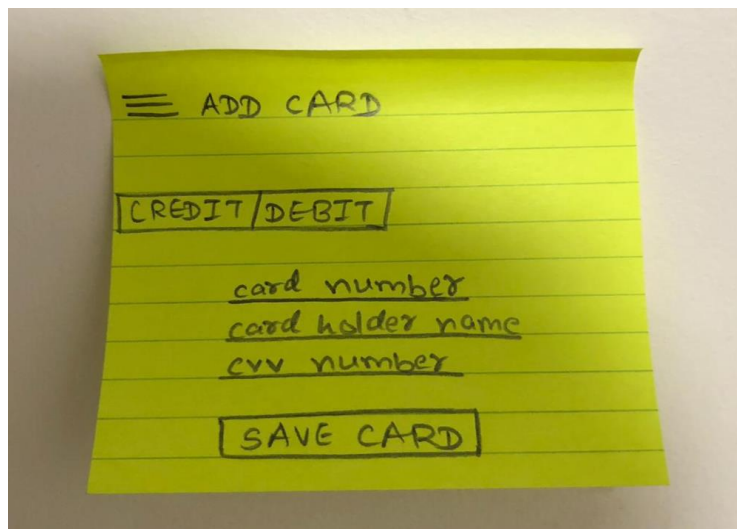

Figure 2.4.3.1: A user can make payment.

User Story: A user can add a credit/debit card.

Figure 6: A user can add a credit/debit card.

User Story: User can view the ticket history.

Figure 2.4.3.3: A user can view purchased tickets/passes.

User Story: User can activate the ticket..

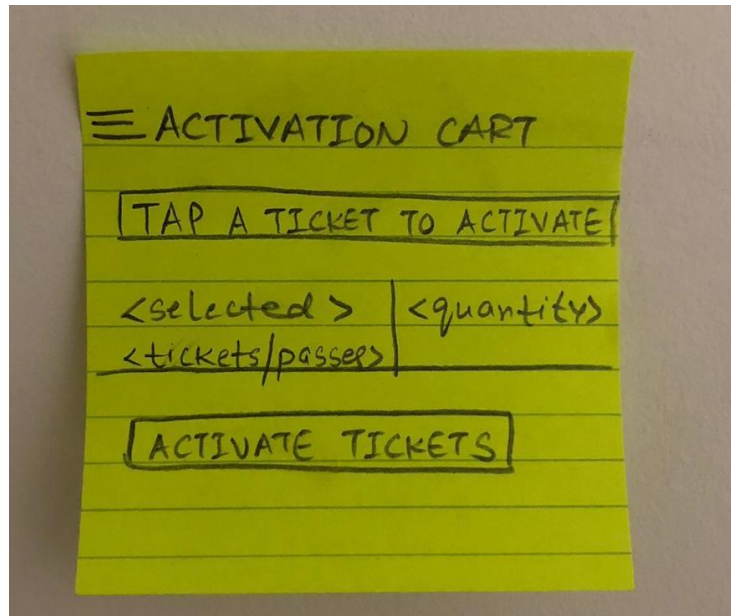

Figure 7: A user can activate the ticket.

APPENDIX B

1.0 Introduction

1.0.1 Goals

The testing goals of the project include proper and user friendly application access to the users and the administrators . Testing all the minor and major functionalities of the application to ensure smooth running of the application.

Testing ensures that all the requirements of the project are met . Our team focuses on testing the functional aspects of the application and later on testing the system as a collective unit. The procedure includes testing the functionality and finding the errors in order to resolve them.

1.0.2 Risks And Assets

The following risks are included with the TTCPay application:

1. The availability of the internet for a smooth access to the application.
2. Availability of latest android version on user's phone for an easy access to the application.
3. User can buy at most 20 tickets at a time on the application.

2.0 Scope

2.0.1 Features To Be Tested

Functional and non-functional requirements

The features and functions that will be tested during the project are:

1. The user must be able to login in the system as a guest or as a registered user.
2. A user must be able to select the pass or ticket types from the list provided in the application.
3. The user must be able to make the payment for the ticket or pass selected.
4. The user will be able to view the ticket history which he has bought in the past.
5. The ticket or the pass purchased can be activated and terminated as required.
6. The admin is able to view all the information of the registered users.
7. The administrator is able to update the prices and information of the tickets and passes that are available on the application.
8. The system is able to handle bulk processing with multiple concurrent

users accessing the application.

3.0 Testing Procedures

Our team focuses on testing the functional aspects of the application and later on testing the system as a collective unit. The testing strategy applied by our team is the Integration testing strategy. The procedure includes testing the functionality and finding the errors in order to resolve them.

3.0.1 Test Objectives

The testing objective of the project includes finding and resolving the errors which are generated while the development of the project. Testing ensures that the requirements meet the end product result. The quality of the product is ensured by performing tests on different functionalities of the application.

3.0.2 Types Of Testing

Describe the types of testing that the project will use.

3.0.2.1 Unit Testing

The sub systems for the unit tests include :

1. User Login subsystem
2. Ticket or pass selection subsystem
3. Ticket or pass payment subsystem
4. Ticket history subsystem
5. Feedback reporting subsystem

3.0.2.2 Integration Testing

The integration testing strategy include the interaction between different subsystems. The interaction between subsystems in our project is as follows:

1. The user must be able to login in the system in order to perform various tasks such as selecting tickets and purchasing tickets.
2. The user must be able to select the type of pass or ticket in order to pay for the selections.
3. After the successful payment of the selected tickets or the passes , the user must be able to view the purchased tickets/passes in the ticket history subsystem.

3.0.2.3 Acceptance Testing

The acceptance testing of the system involves :

1. The user must be able to login in the application with valid login credentials.
2. Then the user must be able to select the choice of the pass or the ticket.
3. The user must be able to make a successful payment for the choice.
4. The user must be able to view the ticket history details.
5. The user must be able to provide feedback of the experience.

3.0.2.4 Stress Testing

1. Our application must be able to run on an android platform with android version 4.4 or above.
2. A single user can purchase upto 20 tickets in the application at a time.
3. 1 GB ram for emulator or 1 GB RAM for device
4. Wifi or internet support
5. Device must be able to receive messages and notification
6. Minimum 2.4 GHZ quad core processor
7. Device must be supportable to at least Marshmallows API 27 version.

4.0 Schedule and Deliverables

Test Result Table :

Test Cycle	Total test cases	Test cases executed	Test cases passed	Test cases failed
Cycle 1	9	9	7	2
Cycle 2	13	13	9	4

Test Summary Report :

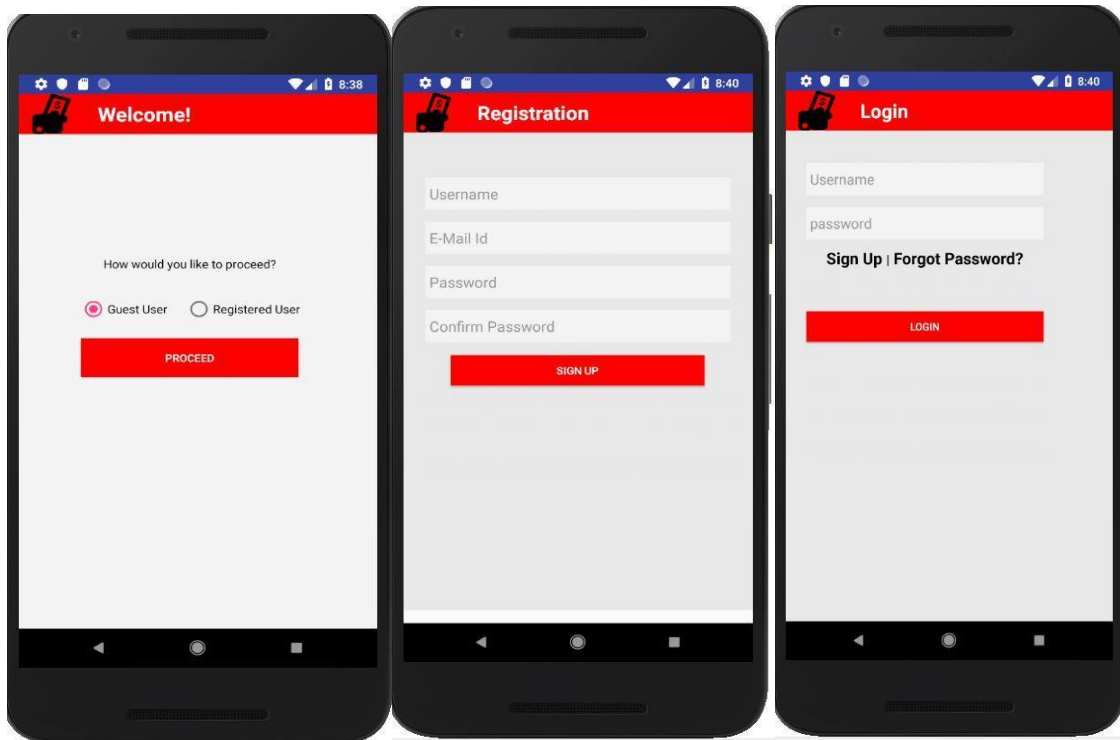

Test Type	Acceptance testing
Test cases passed	19
Test cases failed	5
Total	24

Test Type	Integration testing
Test cases passed	8
Test cases failed	2
Total	10

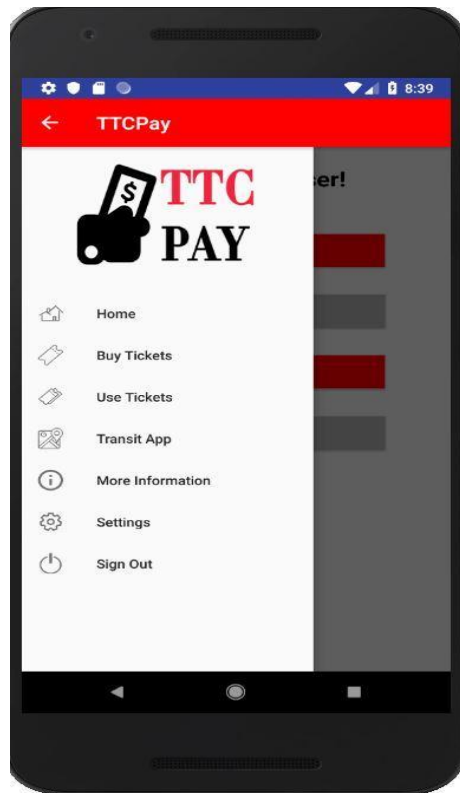

Appendix C

Screenshots of all the user stories :

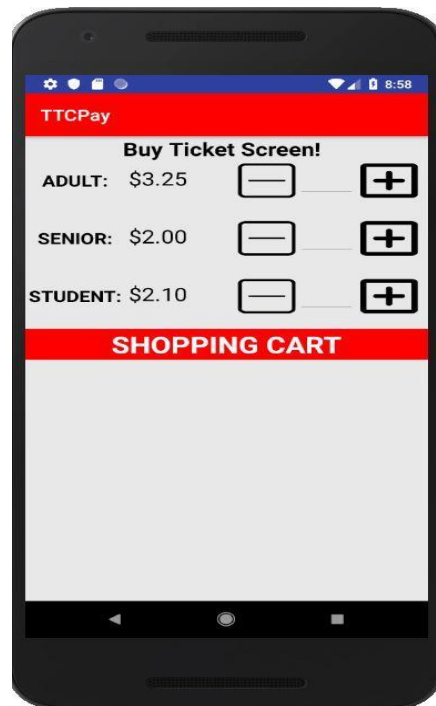

User Story : A user can access the application either as guest or existing user

User Story : User can access menu in application.

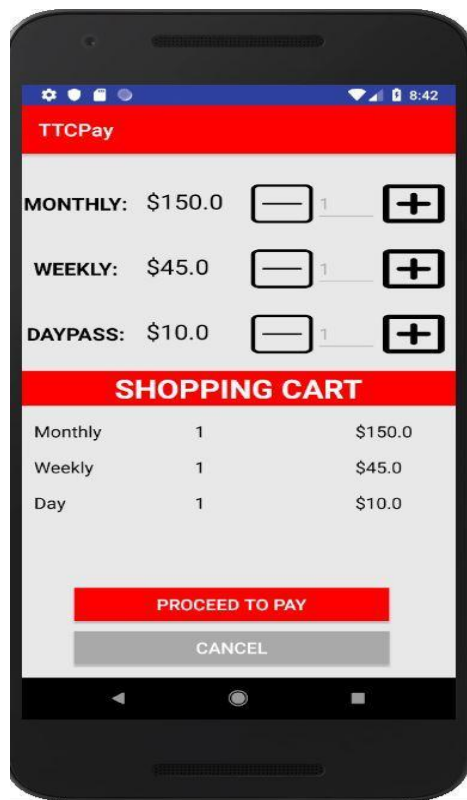

User Story : User can choose the category of ticket(i.e: adult, student or senior).

User Story : User can select the type of the pass.

User Story :User can buy a pass before travelling.

User Story : A user can buy a ticket.
